

REMARKS

The specification and claims have been carefully reviewed in the light of the Office Action to which the amendment is responsive. Applicant's attorney wishes to thank the Examiner for the courteous telephone interview during which the foregoing amendments to claim 35 were discussed.

Claims 3-17 and 35-43 have been rejected under 35 USC § 112 by reason of the negative limitations pointed by the Examiner. Claim 35 as now presented has eliminated the negative limitations, while positively reciting the novel features of the invention in a manner supported by the specification. The claim now calls for a nozzle assembly having a rotatable nozzle housing with a cylindrical chamber, the nozzle housing being formed with (1) a breaking fluid discharge opening having an orientation that opens outwardly of the cylindrical housing chamber in the direction of rotation of the nozzle housing for directing liquid outwardly of the housing to retard rotation of the nozzle housing as an incident to the direction of pressurized fluid through the housing and breaking discharge orifice (*See Spec. page 5, lines 1-2, 6*), and (2) at least one spray discharge orifice that opens outwardly of the cylindrical housing with an orientation different from the breaking fluid discharge opening for discharging a predetermined fluid spray from the rotatable housing as an incident to the direction of pressurized fluid through the housing (*See Spec. page 7, line 7*).

Hence, as discussed, claim 35 as now presented is believed to satisfy and overcome the objections of record, and since the remaining claims in issue all are depended upon claim 35, for similar reasons they are believed to be allowable. Accordingly, it is requested that the application be passed to allowance.

Respectfully submitted,

Dennis R. Schlemmer, Reg. No. 24,703
